Cross mending

Complete the Pattern: Ceramics

You're an archaeologist on a dig and you find a pile of broken ceramics! You clean them up in the lab and see some of the pieces fit together. Using *cross mending* (fitting together pieces of an object) you find that some of the original vessel is missing. How will you make it whole?

Use the pattern on the ceramic as a guide to draw in the missing pattern and then color it in to discover the past.

English Delftware
