Stratigraphy Game

One way archaeologists tell time is through the principle of stratigraphy. The main idea behind stratigraphy is that older things will be buried below more recent things, making it possible for archaeologists to determine that some types of objects or sites were used before or after others.

Order the objects below (1-6) in the order that they were buried, with #1 as the oldest object and #6 as the youngest. Hint: Start with the oldest object, which will be at the bottom of the drawing!

Answer: 1. Projectile Point 2. Mirror 3. Bone 4. Sugar Bowl 5. Brick Wall 6. Ink Well
